Video Services Forum (VSF) Technical Recommendation TR-10-2

Internet Protocol Media Experience (IPMX):
Uncompressed Active Video

VSF_TR-10-2_2022-04-19-DRAFT

INTELLECTUAL PROPERTY RIGHTS

RECIPIENTS OF THIS DOCUMENT ARE REQUESTED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT CLAIMS OR OTHER INTELLECTUAL PROPERTY RIGHTS OF WHICH THEY MAY BE AWARE THAT MIGHT BE INFRINGED BY ANY IMPLEMENTATION OF THE RECOMMENDATION SET FORTH IN THIS DOCUMENT, AND TO PROVIDE SUPPORTING DOCUMENTATION.

THIS RECOMMENDATION IS BEING OFFERED WITHOUT ANY WARRANTY WHATSOEVER, AND IN PARTICULAR, ANY WARRANTY OF NONINFRINGEMENT IS EXPRESSLY DISCLAIMED. ANY USE OF THIS RECOMMENDATION SHALL BE MADE ENTIRELY AT THE IMPLEMENTER'S OWN RISK, AND NEITHER THE FORUM, NOR ANY OF ITS MEMBERS OR SUBMITTERS, SHALL HAVE ANY LIABILITY WHATSOEVER TO ANY IMPLEMENTER OR THIRD PARTY FOR ANY DAMAGES OF ANY NATURE WHATSOEVER, DIRECTLY OR INDIRECTLY, ARISING FROM THE USE OF THIS RECOMMENDATION.

LIMITATION OF LIABILITY

VSF SHALL NOT BE LIABLE FOR ANY AND ALL DAMAGES, DIRECT OR INDIRECT, ARISING FROM OR RELATING TO ANY USE OF THE CONTENTS CONTAINED HEREIN, INCLUDING WITHOUT LIMITATION ANY AND ALL INDIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES (INCLUDING DAMAGES FOR LOSS OF BUSINESS, LOSS OF PROFITS, LITIGATION, OR THE LIKE), WHETHER BASED UPON BREACH OF CONTRACT, BREACH OF WARRANTY, TORT (INCLUDING NEGLIGENCE), PRODUCT LIABILITY OR OTHERWISE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. THE FOREGOING NEGATION OF DAMAGES IS A FUNDAMENTAL ELEMENT OF THE USE OF THE CONTENTS HEREOF, AND THESE CONTENTS WOULD NOT BE PUBLISHED BY VSF WITHOUT SUCH LIMITATIONS.

Executive Summary

Internet Protocol Media Experience (IPMX) was created to foster the adoption of open standards-based protocols for interoperability over IP in the media and entertainment and professional audio/video industries. IPMX is based on the SMPTE ST 2110 standard and as such the VSF TR-10 suite of technical recommendations is a set of differences between SMPTE ST 2110 and IPMX.

This technical recommendation documents the transport of uncompressed active video using RTP protocol in IPMX. It documents the differences between TR-10-2 and the SMPTE ST 2110-20 specification.

DRAFT

1 Introduction (Informative)

IPMX, which stands for IP Media Experience, is based on two families of specifications. The SMPTE ST 2110 Professional Media Over Managed IP Networks suite of standards for the transport of video, audio, and ancillary/control signals over IP networks, and the NMOS REST APIs from AMWA, which provide discovery, connection management, and control.

IPMX is an accessible, open standard that meets the needs of professional and consumer video and audio users in a wide variety of contexts while giving manufacturers and developers what they need to build low-latency, interoperable, IP based audiovisual products or applications.

This document covers the IPMX transport of uncompressed active video using the RTP protocol. Other aspects of the IPMX system as well as other IPMX individual media essence types and their individual requirements are documented in other parts of this Technical Recommendation.

1.1 Contributors

The following individuals participated in the Video Services Forum IPMX working group that developed this technical recommendation.

Jean Lapierre (Matrox)
Danny Pierini (Matrox)
Wes Simpson (LearnIPVideo)
Jed Deame (Nextera)
Alain Bouchard (Matrox)
John Fletcher (BBC)
Paulo Francisco (Evertz AV)
Jean-Baptiste Lorent (IntoPIX)
Andreas Hildebrand (ALC NetworX)
Karl Johnson (Christie Digital)
Jack Douglas (PacketStorm)
Arnaud Germain (Intopix)
Ron Stites (Macnica)
Andrew Starks (Macnica)
Chris Lapp (Cisco)
Brad Gilmer (VSF)
Andre Testa (Matrox)
Greg Stigall (Warner Media)
Peter Brightwell (BBC)
Karl Paulsen (Diversified)
Clark Williams (Christie Digital)
Bob Ruhl (VSF)
Lynn Rowe (Consultant to Crown Castle)
Bob Baker (Clark)
Robert Welch (Arista)
Marc Levy (Macnica)
Scott Olsen (Warner Media)

Tadahiro Watanabe (Macnica)
Teiji Kubota (Macnica)
Daniel Bouquet (Analog Way)

1.2 About the Video Services Forum

The Video Services Forum, Inc. (www.videoservicesforum.org) is an international association dedicated to video transport technologies, interoperability, quality metrics and education. The VSF is composed of [service providers, users and manufacturers](#). The organization's activities include:

- providing forums to identify issues involving the development, engineering, installation, testing and maintenance of audio and video services;
- exchanging non-proprietary information to promote the development of video transport service technology and to foster resolution of issues common to the video services industry;
- identification of video services applications and educational services utilizing video transport services;
- promoting interoperability and encouraging technical standards for national and international standards bodies.

The VSF is an association incorporated under the Not For Profit Corporation Law of the State of New York. [Membership](#) is open to businesses, public sector organizations and individuals worldwide. For more information on the Video Services Forum or this document, please call +1 929-279-1995 or e-mail opsmgr@videoservicesforum.org.

3 Conformance Notation

Normative text describes elements of the design that are indispensable or contain the conformance language keywords: "shall," "should," or "may."

Informative text is potentially helpful to the user but not indispensable and can be removed, changed, or added editorially without affecting interoperability. Informative text does not contain any conformance keywords.

All text in this document is, by default, normative, except the Introduction and any section explicitly labeled as "Informative" or individual paragraphs that start with "Note:"

The keywords "shall" and "shall not" indicate requirements strictly to be followed to conform to the document and from which no deviation is permitted.

The keywords "should" and "should not" indicate that, among several possibilities, one is recommended as particularly suitable, without mentioning or excluding others; or that a certain course of action is preferred but not necessarily required; or that (in the negative form) a certain possibility or course of action is deprecated but not prohibited.

The keywords "may" and "need not" indicate courses of action permissible within the limits of the document.

The keyword “reserved” indicates a provision that is not defined at this time, shall not be used, and may be defined in the future. The keyword “forbidden” indicates “reserved” and in addition indicates that the provision will never be defined in the future.

A conformant implementation according to this document is one that includes all mandatory provisions ("shall") and, if implemented, all recommended provisions ("should") as described. A conformant implementation need not implement optional provisions ("may") and need not implement them as described.

Unless otherwise specified, the order of precedence of the types of normative information in this document shall be as follows: Normative prose shall be the authoritative definition; Tables shall be next; followed by formal languages; then figures; and then any other language forms.

5 Definitions

For the purposes of this document, the terms, and definitions of VSF TR-10-1 and those of SMPTE ST-2110-20:2017 apply.

6 General Provisions

All IPMX Senders and Receivers shall comply with the following specifications:

SMPTE ST 2110-20:2017 Sections 1-5, 6.1.2, 6.1.4, 6.1.5, 6.2, 6.3, and 7, subject to the constraints in this document

The active sample arrays of the video essence shall be transported using RTP (IETF RFC 3550), subject to the constraints and payload formats defined elsewhere in this document and in the applicable sections of ST 2110-20:2017.

Unless otherwise noted, multi-octet fields within the RTP Header, RTP Payload Header, and RTP Payload shall be transmitted in Network Byte Order (most significant byte first).

When represented in bit-field diagrams, the most significant bits of multi-bit fields shall occupy the lowest-numbered bit index positions (left-most positions in the figures), and shall be transmitted first.

The image technical metadata necessary to receive and interpret the RTP stream shall be communicated via SDP as defined in section 7 of SMPTE ST 2110-20:2017.

IPMX Senders shall make their SDP object available through the method described in TR-10-8.

Senders and Receivers compliant with this standard shall comply with the provisions of VSF TR-10-1, TR-10-8 and TR-10-9.

7 Payload Formats

IPMX Receivers compliant with this standard shall support media payload sample format of YCbCr 4:2:2 with a bit depth of 10 bits per component, and RGB 4:4:4 with a bit depth of 8 bits per component.

8 Media Clock, RTP Clock, and RTP Timestamps

The Media Clock and RTP Clock shall comply with the provisions of VSF TR-10-1. The Media Clock and RTP Clock rate for streams compliant with this standard shall be 90 kHz.

All RTP packets which are part of the same progressive frame shall contain the same RTP Timestamp value.

All RTP packets which are part of the same interlaced field shall contain the same RTP Timestamp value.
